From Accounting to Accountability: 
Managing Accounting Records 
as a Strategic Resource 

ZIMBABWE: A CASE STUDY 

[infoDEV No. 257-980121]

ACKNOWLEDGEMENTS

The support and courtesy extended by the officials of the Government of Zimbabwe and their willingness to explore a wide range of complex issues made the field research productive and enjoyable. We should particularly like to thank the following individuals for their kind assistance with our initial research and for information and advice offered throughout the study: Mr J Gutu, Accountant General; Mr Harid, Comptroller and Auditor General; Mr P Mashingaidze, Deputy Accountant General; Mrs J Mukamba, Deputy Auditor General; Mr S A Mzondo, Deputy Auditor General; Mrs D Sibanda, Acting Deputy Director, National Archives; Mrs Vingirai, Director of Audit; and Mr S T Mutsau, Director of Audit.

We should also like to thank the many other senior officials, civil society representatives and others that contributed important insights (their names are listed in Appendix A).

Special appreciation is extended to Mr F Maunze, Head of Records Management at the National Archives, who participated in all interviews and Mrs Chinyemba, Assistant Chief Accountant (Internal Audit), Accountant General’s Office. Their guidance and support enabled the team to bring the field study to a successful conclusion.

Finally, we would also like to thank the project’s task manager Mr Clive Smith of the World Bank Archives for his guidance and support and Ms Jacqueline Dubow, also of the World Bank for ensuring our connection with the Information for Development (infoDEV) program worked smoothly.

EXECUTIVE SUMMARY

Overview of the issues

Donors have invested heavily in promoting the reform of government accounting systems in sub-Saharan Africa. Many efforts to strengthen financial controls fail because the fundamental structures needed to underpin them are often overlooked; this includes record keeping. Administrators, donors and other stakeholders need to know why this is the case; moreover, tools are required to improve the success rates of such projects.

A fundamental problem is how the accounting information is managed to ensure that it is readily accessible and meets legal and audit requirements. As recent research has shown, there is a relationship between chaotic paper record systems and the success or failure of automation projects.1 A key area for investigation will be the optimal way of designing the linkages between the paper-based parts of accounting systems, which may be mainly located in the regions and districts, and the computerised parts, located mainly in the capitals.

The objective of the research is to contribute to the improvement of government financial accountability. It will analyse the quality of records required by government accounting systems to strengthen public sector financial management and to support the decentralisation of government. On the basis of these findings it will produce a reference model for integrating records management into accounting system reform projects. The model will set down the requirements for managing accounting records and provide tools to audit the effectiveness of record keeping systems and the capacity for records management programmes to monitor and evaluate these systems.

Scope of the report

This report covers a field study visit by Kimberly Barata, Piers Cain and Mary Serumaga from 19 July – 6 August 1999. The purpose of this visit was to:

- identify the automated and paper systems used to support financial management functions in the Ministry of Finance and one revenue and one expenditure department
- interview individuals involved in financial control including accounting officers in selected line agencies and internal and external auditors
- assess the requirements for arranging and managing the financial records that relate to each function

• examine the design for the integrated computerised planning, budgeting and accounting system which will be piloted in the Ministry of Education, Sports and Culture in December 1999

• identify relevant areas of government to participate in testing exercises

• secure support from the Accountant General and Auditor General to test project tools during the second visit.

This was planned to be the first of two field visits to develop a case study of financial accountability and records in Zimbabwe.

This report covers an initial review of accounting records systems in the Government of Zimbabwe. It represents the first stage of an investigation to produce a case study on financial management accountability and record keeping in the Zimbabwe public service. The issues identified will contribute to the development of a reference model to define best practice for integrating records management into accounting system reform projects.

The Accountant General has primary responsibility for the maintenance of central and departmental accounting systems. A study was made of the Government’s accounting system and the records generated and used. In particular, the main documentation flows examined were payments, revenue, payroll and pensions. Information flow diagrams are assembled in Appendix D, F and G.

Conclusions: Records Management Programme

The creation and maintenance of records, and the provision of access to them, is an integral part of any financial system, whether paper or electronic or a mixture of both. Record keeping underpins financial systems and provides the means by which decisions and transactions may be verified and reported upon. Records provide the foundation for accountability. In Zimbabwe, the records management system that should support the goals of the accounting system has weaknesses; thus the Government’s fiscal accountability is vulnerable.

The National Archives of Zimbabwe has responsibility for providing a records and information management service to government ministries and departments, local authorities and parastatals. Interviews revealed that many accounting and registry staff in the ministries are unaware of the services provided by the National Archives. The National Archives Records Centre does have an inspectorate role, of which the inspection plan provides evidence of best practice. However owing to resource constraints, the present system is too irregular and unsystematic to be effective and those inspections that are completed are meaningless because officials do not take account of recommendations.

Despite efforts, the National Archives is not realising its full leadership potential. There is little problem with records staff obtaining basic introductory training in registry services and records management. Yet there is a need to take training further and look more critically at how records are created and kept by the departments. In addition, there is a need for the National Archives to encourage ministries to ensure that accounting clerks with responsibility for financial records receive available introductory training in keeping records. Reciprocally,
the National Archives Records Centre needs to appoint a financial records specialist to advise on the management of these classes of records.

Many aspects of the Government’s accounting system clearly work well and there are lessons on best practice that can be learned. However, the records management system that should support the goals of the accounting system is weak. The origin of this problem is that accounting clerks do not receive training in how to manage records properly. The research demonstrates that the absence of tracking systems is a key factor in explaining why accounting systems are failing to perform adequately. It also supports the need for a planned process of evaluating and monitoring record keeping systems. Where problems occur, there is no recognised authority that can enforce compliance with records legislation or pursue disciplinary action. Increasingly, this can become a problem that can undermine the Government’s plans to successfully implement a strategic countrywide computerised financial management system. This will also have consequences for the Government’s ability to be transparent and demonstrate financial accountability to citizens.

**Conclusions: Financial Management Issues**

Zimbabwe is considering options to focus government expenditure on essential services and accelerate privatisation in order to increase efficiency. This report situates the findings within this policy context. It also considers the legislative environment that exists that supports record keeping in assisting the government in meeting its financial management objectives.

The Government of Zimbabwe provides an example of a well-documented manual batch accounting system that depends upon mainframes for the final processing of accounting information. However, the Government is facing difficulties controlling and managing expenditure within all of its ministries. A contributing factor, as the Government’s accounting system clearly illustrates, is the absence of a records management programme for financial records. It is clear from the Comptroller and Auditor-General’s report that this gap in the financial management infrastructure leads to information not being accessed in a timely and efficient manner.

Most ministries in Zimbabwe have registries to manage correspondence, but financial records are not managed as part of these systems. Officials’ concern for the security of financial records prevents them from being stored outside of the accounting office until after audit. This is a problem because clerical accounting staff are not trained adequately to manage records in a consistent way. The *Financial Instructions* and *Accounting Manual* offer only limited guidance. However, the fact that the procedures set out in the *Financial Instructions* and *Accounting Manual* are consistently followed in most ministries indicates the strength of the existing system.

The payments system works well and the accounting clerks are knowledgeable about the system. However, the system is not integrated. Manual systems are used to capture and summarise transactions. Centralised data capture occurs only at the point at which transactions are authorised for payment. As a result, the system does not provide adequate information on which to base decisions affecting financial management.
To address this issue, the Ministry of Finance has commissioned a computerised integrated Public Financial Management System (PFMS). The PFMS is intended to provide Zimbabwe with a modern accounting and financial management system that will have access to all the line ministries’ financial information and be able to control, monitor and supervise the management of public funds. The design of the proposed system has real strengths and should reflect financial performance more accurately although it may not fully meet the requirements for financial accountability. The PFMS system specification has extensive reporting requirements, much of which consist of printed reports that are required for accountability purposes. Current planning does not take account of the management of the outputs of this system.

The Department of Customs and Excise provided an example of revenue administration. Officials admit that there is no effective records management system to control Bills of Exchange and other transaction records. The situation is similar to that found in the payments section where officials keep transaction records in offices, but have no training in records management. Registries exist to control correspondence records. The central registry in Customs and Excise carries out regional inspections and offers an example of best practice in terms of how inspections are carried out. However, the registry supervisor has no influence in bringing transaction records held in the department’s offices under control.

The human resource function is made up almost entirely of manually based processes that feed into a central computer system that processes the Government’s salary bill. Payroll procedures are clear and well understood. However, there are problems in querying files because the registry system has become highly congested, making information retrieval difficult. Similarly, information flows throughout the pension system are slow. Transaction records are not managed by the registry system and much staff time is lost searching for files.

**Summary of Conclusions**

The accounting system used in Zimbabwe is an example of a well-documented manual batch accounting system that depends upon mainframes for the final processing of accounting information. In the case of Zimbabwe, the Financial Instructions and Accounting Manual document plainly the relationships between the various components of the accounting system. Clerks were clear, for the most part, about how the current system operates and where they fit into the process. If adhered to, these instructions and the procedures for carrying them out should lay a path from which one can easily trace document flows and compile the record of a transaction.

The records management system that should support the goals of the accounting system is weak. Initial findings reveal a split between how accounting units manage transactional records and the method departmental registries use to control correspondence and other documents (eg policy documents and so on). Registries employ standard controls to manage records. These controls include: registration, classification, indexing, tracking and appraisal and disposal of records. However, transaction records are kept in a different way. Because officials are concerned about the security of transaction records, accounting clerks keep them separately in offices. This is a problem because clerks do not receive training in how to control records properly and they do not work with records staff to establish appropriate systems to cope with the large volume of paper inputs and outputs of the system.
Communications with the regions is a key issue, particularly as evidenced in sectors such as education where accounting information is being sent regularly into the parent ministry to be aggregated and processed centrally. Delays in communicating and recording commitments are often an important factor in over-expenditure. As a result, the ability to track transactions through the system is a critical issue. Because accounting staff do not employ systems to register and track records, it is difficult, if not impossible, to retrieve them for audit purposes and other inquiries. The research demonstrates that the absence of tracking systems is a key factor in why accounting systems fail to perform adequately.

The findings also support the need for a planned process of evaluating and monitoring record keeping systems. The ability to evaluate and monitor is a critical component of any systematic approach to capacity building. Zimbabwe is a source of best practice in this area because the Records Centre does have a formal method for inspecting record keeping systems. However, they do not have the resources to ensure that this programme is fully operational and can meet demand. One outcome of the research will explore the importance of the Auditor General’s reports in identifying key areas for attention, thus enabling the National Archives to prioritise interventions.

The Ministry of Finance is in the process of taking the next step in automating its processes by commissioning the development of an integrated financial management system. The planned integrated system is intended only to automate existing procedures, eliminate unnecessary steps and close gaps in the system. While the Accounting manual will need to be updated in accordance with these changes, the guidance offered will, fundamentally, stay the same. In addition to having the basic foundations of a good system, there is evidence of substantial process analysis and there appears to be strong project management for the implementation of an integrated financial management system.

With regard to the system’s compliance with records management principles, Standing Instructions for accounting records exist, but will need to be revised accordingly. The main problem between the planned integrated system and the records management programme is the lack of knowledge about the latter’s existence. As a result, the records management requirements for financial records have not been taken into account in the development of the new system.
PART ONE: INTRODUCTION

Methodology

Kimberly Barata, Research Officer for the International Records Management Trust – Rights and Records Institute, and Mary Serumaga, MS Associates in Uganda carried out the study with the supervision of Piers Cain, Director of Research, Development and Education for the Institute, the guidance of Dr Anne Thurston, Executive Director of the Trust, and with support from Dawn Routledge, Research Assistant for the Institute.

The field work was carried out to produce a case study on financial management accountability and record keeping in the Government of Zimbabwe. Information gathered will provide the basis for the development of tools to strengthen public sector financial record keeping in support of financial accountability. The fieldwork was necessary to ensure that the tools will reflect accurately the practical concerns and local realities in Zimbabwe.

Ms Barata, Mr Cain and Ms Serumaga spent a total of three weeks in Harare. Ms Serumaga, acted as the local research adviser. The local research adviser provided an invaluable ‘reality check’ on who should be interviewed, how interviews should be approached and whether the information obtained in those interviews was accurate, well founded and related to local realities. The Accountant General and Auditor General participated along with senior members of their staff. Senior officials from the Ministry of Finance, Office of the Comptroller and Auditor General, National Archives, Ministry of Public Service, Labour and Social Welfare and the Ministry of Education, Sport and Culture also provided important insights.

The work programme involved:

- interviewing officials of the Ministry of Finance with responsibility for administration and finance for the Ministry; civil servants of the Office of the Comptroller and Auditor General responsible for external audits of manual and electronic systems; officials of the Ministry of Education, Sport and Culture responsible for the administration and finance, auditing and registry management; representatives of the Customs and Excise Department responsible for administration and finance, auditing and registry management; and representatives of aid agencies

- documenting manual and computerised financial management systems and internal user requirements

- consulting the National Archives on records management training and practice

- identifying relevant financial management systems that would provide appropriate test sites.
Limitations of Study

It was originally intended that the study would be completed by a second field visit. Unfortunately, owing to unforeseen circumstances, it has not been possible to carry out the second visit. Consequently, there are a number of issues that have not been fully explored.

Policy Context

The field research for this case study was carried out in the summer of 1999. Already Zimbabwe was facing a fiscal crisis that required urgent action to avoid triggering an accelerated growth of poverty. By then it was clear that governance issues would be decisive in shaping Zimbabwe’s future. Decentralisation, accountability, policy-making and corruption were emerging as challenges for the Government. Capacity issues were also of great concern, including the capacity for the Government to manage its finances. The Government was already facing difficulties controlling and managing expenditure within all of its ministries.

The Government of Zimbabwe has operated with an unsustainable gap between government income and spending since 1985. In 1991, the Government launched an Economic Structural Adjustment Programme (ESAP) to promote growth with equity. Progress was made in deregulation and external trade reforms, but poor economic performance in drought years, continued parastatal losses, and slow civil service reforms prevented a reduction in the fiscal deficit.

During 1997, a number of government decisions, including un-budgeted payments of pension arrears to war veterans, and the listing of 1,471 private farms for compulsory acquisition, undermined foreign and domestic investor confidence in government policy-making and there was a run on the currency. Since then, poor export performance, continued public enterprise losses, a series of government decisions on food and energy prices and tax concessions, as well as the intervention in the Democratic Republic of Congo and concerns about corruption, continued to weaken confidence. As a result, in 1998 the Zimbabwe dollar depreciated by 60% and inflation rose to over 40%. By early 1999, interest payments on domestic public sector debt were rising sharply and threatened further increases in the fiscal deficit, interest rates and inflation.

To address this fiscal crisis, Zimbabwe was considering options to curb public enterprise losses, focus government expenditure on essential services and accelerate privatisation in order to increase efficiency. Lending agencies recommended improved budgetary planning and expenditure management, including analysis of the impact of poverty on different programmes.

Policy analysts stressed the need for government commitment to clearer poverty reduction targets with improved co-ordination between ministries. Effective implementation would require greater participation by beneficiaries, the private sector and civil society in decision-making and service delivery. The Government’s achievements in expanding services to its people had been impressive, but were beginning to fade with capacity constraints and lack of resources.
Since the research team’s field visit, Zimbabwe has been confronted by an increasingly worsening financial crisis. It is facing chronic fuel and foreign exchange shortages that are paralysing much of the economy. By February 2000 it was estimated that the Government faced more than $1 billion of domestic debt. Subsequent, political, diplomatic and economic developments have accentuated the problems identified in the summer 1999. The catastrophic decline in the value of the Zimbabwean dollar has caused enormous problems for government finances.

Financial Management Objectives and Issues of the Government of Zimbabwe

Zimbabwe is facing difficulties controlling and managing expenditure within all of its ministries. There are a range of factors indicating a widespread failure to manage public funds adequately.

Overview of Public Sector Accounting and Auditing

The Accountant General’s Office was established in 1987 as a component of the Ministry of Finance without separate legal status. The Accountant General has primary responsibility for the maintenance of central and departmental accounting systems. The Accountant General’s Department is divided into three main units: Consolidated Accounts and Policy; Aid Accounting, Funds and Parastatals; and Government Accounting Services (see Appendix C for organisational charts). Broadly, the Accountant General’s Department has two main aims:

- accounting for all funds
- developing accounting systems throughout government.

At present, the Department operates a cash accounting system with modifications (ie it runs a commitment system, but does not make available all the information). On a monthly basis, the Accountant General is responsible for consolidating the figures and producing a report that summarises revenue, expenditure and deficit. The report is taken to the budget committee for review before it is discussed with the Ministry of Finance. If necessary, the report may pass to Parliament.

The Accountant General’s Department accounts for all funds through:

- **Cash Management:** The Accountant General works with the Reserve Bank to develop cash flow. At present the Government is both running an overdraft and is issuing treasury bills.

- **Debt Management:** The External Loans Co-ordination Committee (ELCC), the Ministry of Finance and the Reserve Bank handle Debt jointly. All loans above a certain threshold go through this review. The Accountant General keeps all the ledgers.

---

2 Ernst & Young. Government of Zimbabwe, Ministry of Finance, FMS Project Deliverables, Volume 1 (July 1998)
• **Foreign Aid Management:** Within the Aid Accounting, Funds and Parastatals section of the Accountant General’s Department, the National Development Fund (NDF) handles what is mostly trust accounts for the consolidated review fund and the cash management for foreign aid. The Accountant General is responsible for accounting for these resources, most of which are not channelled through the budget. Instead, budgeting is managed through the nominal vote (i.e., Vote of Credit portion of budget allocations). The Vote of Credit is created to estimate donor funds and consolidate them into one vote and then transfer funds to the appropriate ministries handling donor-funded projects. Note: The NDF handles over 2,300 donor-funded projects (both on-going and complete). During one interview, it was revealed that the NDF does not receive completion reports from the ministries. This results in the NDF having to keep files open that should be closed after four or five years. To date, all project files dating from Independence in 1980 remain open.

• **Revenue Administration:** The Accountant General accounts for all revenue, approximately 80% of which comes from customs and taxes and 20% from ministry assets and services. New legislation is being developed that includes the formation of a National Revenue Authority to reconcile customs and taxes; VAT is being introduced.

• **Accounts Administration:** The Tender Board collects all tender bids and ensures neutrality. It is regulated by the Accountant General’s Department which deals with issues pertaining to the rules and regulations governing procurement. The central stores have been dissolved due to inefficiency. Amongst other problems, the stores staff were deliberately not keeping records.

• **Internal Audit:** The Accountant General co-ordinates with internal auditors working in the line ministries. In Zimbabwe, internal audit is principally a post and not a pre-audit function; it is not comprehensive. Broadly, the Accountant General views internal audit as a management tool that looks at the systems to ensure whether internal checks and controls are in place. The Accountant General’s Department is responsible for developing internal audit standards and working with internal auditors to develop their capacity. However, at present, most internal auditors are not well trained and are not in a position to challenge directors.

To perform these functions, the Accountant General’s Department interacts with other departments and agencies that exercise aspects of financial management. Other critical bodies include:

• Planning Commission: controls development projects that are accounted for under the National Development Fund

• Public Services Commission: controls the establishment of all civil servants

• Central Payments Office: responsible for the processing of records of balances of all funds

• Central Computing Service: responsible for information technology operations through Government
• The National Pensions Office: responsible for the administration and payment of pensions

• The Office of the Comptroller and Auditor-General: responsible for the external audit function throughout Government departments and parastatals.

The appointment and duties of the Auditor-General are set out in the 1979 Constitution and the audit requirements are set out in the 1967 Audit and Exchequer Act which was last amended in 1996. The Comptroller and Auditor-General performs the key function of scrutinising, on behalf of the Public Accounts Committee, the details of all accounts in the ministries and, since 1989, parastatals, and carrying out value for money audits.

Although independence of the Office of the Comptroller and Auditor-General is provided for under the law, all staff are civil servants and are governed by civil service regulations. Funding is provided through the civil service budget allocation process. These arrangements impair the independence of the Office. Discussions to resolve this have been underway for some time.

Auditing is done according to an audit plan based on INTOSAI standards. It is clear from the Comptroller and Auditor General’s annual report that there is a significant problem throughout government with keeping financial records. (See Appendix B for an analysis of the Comptroller and Auditor General’s report). In interviews, auditors commented that the accounts sections in the ministries are not trained to keep records, as evidenced by poor filing systems. Although the auditors feel that manual internal control is fairly good, they suspect that many of the problems are due to a lack of supervisory control. For example every accounts section has copies of the Financial Instructions and Accounting Manual, but often these are not being used. When records are lost or destroyed and it is not related to fraud, individuals interviewed feel it is due to incompetence.

The Comptroller and Auditor General’s Department has the ability to perform electronic audits through its Information Technology Section. The IT Section has been performing electronic audits for approximately four years. Approximately one year ago, the IT Section audited the payroll and general ledger systems. The computerised accounting and salary files were brought to the Comptroller and Auditor General’s Department in ASCII format and then audited using IDEA software. The process involves taking a sample and checking the error frequency. If the error frequency is too high, another sample is taken. This process is particularly effective for computerised Commitment Registers and matching vouchers to dates. In terms of audit evidence, the section places an emphasis on internal controls such as audit trails and validation controls. An audit also examines the utility programmes to identify who is allowed to bypass systems security. It also looks at who maintains the source code and who is authorised to make changes to the system.

---

3 ie audits that evaluate economy, efficiency and effectiveness.
4 As a member of INTOSAI, Zimbabwe is participating in the INTOSAI development initiative (IDI) on the standardisation of audit practices.
Examples of Poor Financial Management Control and Record Keeping

The following are instances where poor financial management occurs as a result of the lack of timely information. This makes it difficult, if not impossible, to achieve financial control.

The Comptroller and Auditor-General produces regular reports to the Public Accounts Committee criticising the financial management. These reports frequently note the unavailability of financial records that are needed to form an opinion (see Appendix B). However, there is no evidence that any officials have been disciplined specifically for not keeping records.

Ministries over-spend repeatedly against their current budget. In recent years, the Government has regularly had to approach Parliament for supplementary and additional funds because individual Accounting Officers have failed to keep their expenditure within the limits set and agreed in the budget process. This is a problem because the annual budget process is the only mechanism available, at least between elections, to discipline decision making. The budget encompasses all the fiscal operations of government and must also force policy decisions having financial implications to be made against the background of a hard budget constraint and in competition with other demands. Some of the responsibility for this lies with the way the accounting systems record information. The centralised financial system captures only those transactions that are authorised for payment; it does not reflect information about committed expenditure. Manual systems, which are spread throughout central government and district offices, hold this information. Because the information is decentralised it is often difficult and time consuming to retrieve and to translate into a format that is useful for decision-making.

Commitments that are not covered by the budget for the current year are held back and honoured in the new financial year. This results in a growing problem of carry-overs into the new financial year. The effect is that the budget for the new financial year has to pay for a range of expenses incurred in the previous year. In addition, suppliers are being kept waiting for long periods for payment; this reflects badly on the government. Because the central payments systems cannot document committed expenditure, it is difficult to hold Accounting Officers accountable for clearing impending expenditures in a timely way.

The number and value of advances are increasing without being cleared by the staff of the individual ministries concerned. The Financial Instructions clearly forbid issuing additional advances before previous ones are cleared. Whether the problem is inadvertent or deliberate, ministries will not be able to resolve this issue until they are able to produce quickly documentation that proves whether or not a previous advance has been cleared by the system.

Because of the loosening of financial controls illustrated by these examples, fraud is a regular occurrence.
PART TWO: RECORDS MANAGEMENT PROGRAMME

Legislative Environment to Support Financial Record Keeping

The National Archives of Zimbabwe Act of 1986 makes provisions for the management of public records. The Act refers to the management of all government, local government and parastatal records:

6. (1) subject to the provisions of subsection (2) the Director [of the National Archives] may, in respect of any Ministry
   a) inspect and examine the records of that Ministry;
   b) give advice or instructions concerning the filing, maintenance and preservation and, when necessary, the transfer to the National Archives of the records of that Ministry;
   c) give instructions with regard to the retention or destruction of the records of that Ministry.

(2) Before performing any function in terms of subsection (1) the Director shall consult the Secretary of the Ministry concerned and, in the event of any dispute or disagreement arising as to the performance of any such function, the matter shall be referred to the Ministry responsible for the administration of the Ministry concerned for decision and his decision shall be final.

(3) Where the Director gives any instruction in terms of subsection (1), it shall be the duty of the Ministry concerned to comply with such instructions.

7. (1) The Director may request any local authority or statutory body for access to its premises for the purpose of
   a) inspecting and examining its records;
   b) giving advice relating to the filing, maintenance and preservation of its records;
   c) making recommendations with regard to the retention or destruction of its records.

(2) Where a local authority or statutory body declines to comply with a request made in terms of subsection (1), such local authority or statutory body shall advise the Director in writing of its reasons thereof.

(3) On receipt of any reasons from a local authority or statutory body in terms of subsection (2), the Director may make representations in the matter to the Minister responsible for or having authority in respect of, the local authority or statutory body concerned, who may take such action in the matter as he considers proper.

Although this act describes clearly the responsibilities of the National Archives, it does not charge officers within the public service and other institutions with establishing good record keeping practices and making arrangements for the appropriate storage of records in their custody.
In Zimbabwe primary and secondary legislation provide a framework for keeping and controlling accounting and financial records. Section 106 of the Constitution of Zimbabwe, revised edition 1996, sets out the principal duties of the Auditor General. Subsection (3) provides for ‘access to all books, records, returns, reports and other documents that, in his opinion, relate to any of the account.’ Strengthening this, the Audit and Exchequer Act gives the Auditor General the power to ‘cause search to be made in and extracts to be taken from any book, document or record in the custody or possession of an officer’ (Section 9, subsection 1 c) and to ‘have access to the accounts or other records of (a) a statutory body or statutory fund; or (b) a company in which the State holds more than fifty per centum in nominal value of the equity share capital’ (Section 9, subsection 4a/b).

Section 19 of the Audit and Exchequer Act gives internal auditors the responsibility for ensuring that ‘proper accounting records are maintained; and adequate internal checks and controls are observed.’ It goes on to specify that in the performance of his/her functions, an internal auditor ‘shall have free access at all reasonable times to any records, books, vouchers, documents, public moneys or State property under the control of the Ministry or department concerned.’ In addition, the internal auditor can ‘cause search to be made in and extracts to be taken from any record, book, voucher or document under the control of the Ministry or department concerned.’

Furthermore, Section 18 (2) of the Act gives the Treasury authority to issue Treasury Instructions (1990) in matters involving the management and control of public moneys and state property. The Instructions place responsibility on every senior accountant or accountant for ‘the keeping of the financial records and books of account’ (para 0710). It states clearly that ‘when not actually in use all account books and financial records, receipt and licence forms and blank cheque forms shall be kept under lock and key, if possible in a safe or strong room’ (para 0205).

The Accounting Procedures Manual (1984) is issued under the Financial Instructions. It sets out the responsibilities and roles of officers of the government accounting service in the ministries and departments. The Manual details the operating procedures for the central and departmental accounting systems and asset management. While the procedures are comprehensive in describing the purpose, creation, use and distribution of certain financial records within the system, little or no guidance is provided on the control, storage or disposal of records in order to meet the audit, accountability and financial management needs of government.

These provisions indirectly impose an obligation on ministries and departments to ensure that they adequately keep and manage financial and accounting records to facilitate the audit function and the exercise of search and access rights by the Auditor General. However, accountants with responsibility for managing financial records have no records management training. As a result, public sector financial record keeping systems fail to adhere to a proper structure and order.

Legal penalties for accounting mismanagement and maladministration, including failing to keep proper records as specified by the Financial Instructions, are not a feature of the current Audit and Exchequer Act. Those which are referred to in Section 52 of the Act only deal with offences and penalties for a person who hinders or obstructs the Comptroller and Auditor-General, the Treasury or an Internal Auditor in the course of their official duty. In addition, the Public Service Commission Disciplinary Regulations do not provide adequate
internal administrative procedures for disciplinary proceedings and recovery measures. When the Committee on the Operations of the Public Service asked the Chairman of the Public Service Commission to account for the shortcomings, he replied:

Every Accounting Officer can do what he wants because there is none who can pin them down. We are not sure that we are empowered other than for clearly criminal matters of misconduct. If an Accounting Officer fails to do something in respect to management of public funds who really is the competent authority to go to the Accounting Officer and say ‘you have done wrong, you must leave or take disciplinary action.’ This is a bit of a grey area which has been difficult to deal with.

In general, auditors, public service commissions and public accounts committees are reluctant to be cast in the role of policemen. However, where there are cases of persistent and deliberate refusal to maintain adequate records there need to be credible sanctions. It might be desirable to consider specific penalty clauses for the different levels from Accounting Officer to the Assistant Accountant in the event of financial mismanagement and maladministration; this might include either a penalty for not keeping adequate records or a requirement for a commitment to administrative action. As the Special Report of the Public Accounts Committee on the Operations of the Public Service points out:

In an organisation running a company, if you fail to produce or put your books in order for a period of four years, definitely that company will not survive and I wonder how Ministries and Government departments are surviving in situations where they fail to produce their books or provide statements of accounts.

Concern over financial records management was expressed by many of the individuals interviewed. The absence of certain records and the inability to produce records for audit described below appear to support their views.

**Issues in Record Keeping and Records Management**

Accountants and auditors agree that record keeping is important for exercising financial control. Accounting clerks are responsible for routine financial record keeping activities according to the *Financial Instructions* and *Accounting Manual*. Despite this being a straightforward activity, which financial managers claim is understood clearly by their staff, information still cannot be accessed in a timely and efficient manner.

One fundamental reason for this, as the case of Zimbabwe illustrates, is the absence of a records management programme for financial records. Records management is broader than record keeping. *Record keeping* indicates that a system (or system of systems) exists to file current information that the organisation refers to on a regular basis.

---

In contrast, **records management** is a managerial function that aims to provide the intellectual and operational control required to maintain, use and destroy records in either paper or computerised form. This control is provided by the processes of registration and classification, tracking, auditing, access and retrieval, scheduling, retention, transfer and destruction. The opportunity to tamper with or remove financial records is greatly reduced by controlling the movement and physical security of records. In the short term, the records management function aims to supply the right record to the right person, at the right time and at the least possible cost. In the longer term, it identifies which records are no longer administratively useful and provides the rules by which records should be either destroyed in a secure manner or transferred to an archive facility.

For example, each ministry in Zimbabwe purchases supplies and services. Every purchase request results in the creation of several financial documents (eg vendor quotations, tenders, purchase requisitions, vouchers, invoices, commitment registers and so on). Although all of these documents collated together constitute the record of the purchase, they are not necessarily all kept within the same physical filing system. In the ministries examined there is no one centrally-located file that brings together all of the parts of the record of any given purchase. Instead, there are several filing systems spread throughout the ministry and elsewhere that must be taken together to form what could be considered a record keeping system for the purchasing function. For example:

![Diagram of record keeping system](image)

The practice of dividing responsibility for maintaining the total record of a transaction can result in a chaotic system from which it becomes difficult to retrieve information efficiently and one in which fraud can occur more easily. Most ministries in Zimbabwe have registries, but financial records are not managed as part of these systems. Often this is because officials view financial records as a security item that should not be stored outside of the accounting office until after audit.

Clerical accounting staff are not trained adequately to keep records in a consistent way (ie some file according to serial number order, others according to date order, and so on). The Accounting Manual and Financial Instructions offer some instruction, but guidance is inconsistent and limited. For example, there are clear instructions about who is to keep
which document, but in terms of maintaining these documents the manual only offers guidance for payment vouchers (i.e., file according to voucher number).

The impact of this omission is illustrated by the problems faced by the Public Accounts Committee in obtaining evidence to substantiate cases brought before it. The Committee complained that there were instances where accounting officers were unable to produce accounting records when required. Records are frequently lost before a case goes forward and when the accounting clerks are asked to search for the documents, they often cannot be located.

The following are further examples that illustrate problems that occur as a result of the lack of records management:

- Pension payments left in suspense accounts because the files are missing and the Pensions Office cannot reconcile the pension with the pensioner.

- The Comptroller and Auditor General is recording a high instance of mismanagement of records. (See Appendix B). In some cases, this may be a result of the way the accounting clerks and Central Payments Office clerks handle documents. For example, clerks at the Central Payments Office roll up the invoices and vouchers, securing them with an elastic band, prior to returning them to the appropriate ministry. An accounting clerk demonstrated how these elastic bands shift and tear off the vouchers on the outside of the roll or break, leaving the papers to scatter in the delivery van. There have also been cases where whole rolls of invoices and vouchers are delivered to the wrong ministry. In general, no attempt is made to redirect these to the appropriate ministry. Even when clerks notice that documents are missing, there is little follow-up with the Central Payments Office to find the lost voucher/s.

- Accounting staff are aware of the records retention periods indicated by the Treasury Instructions, but they rarely comply with them. They are not aware that the National Archives issues Standing Instructions for accounting records. One staff member knew that she should destroy purchase requests (i.e., the fast copy of the Tradesman’s Requisition) after a set period of time, but was unwilling to destroy them because they might be referred to at a later date. An investigation of the storage facilities reveals clearly that no one uses these records. The most recent documents were piled at random in one drawer of a filing cabinet. The older documents were buried in a safe room (i.e., a locked vault) under debris including tyres, filing cabinets and fluorescent light packages.

**Role of The National Archives of Zimbabwe**

**Statutory Powers**

The National Archives was founded by an Act of Parliament in 1935 and operates on the basis of the National Archives of Zimbabwe Act 1986. It is charged with the responsibility of providing a records and information management service to government ministries and departments, local authorities and parastatals. The records management programme operated by the National Archives controls public records by distinguishing the few that are worthy of permanent preservation from the mass which sooner or later must be destroyed.
Statutory bodies and local government authorities are required by the *National Archives Act* 1986 to organise their records systematically and may, if they choose, have their records stored for them on payment of an annual storage fee. Records are stored in Records Centres in Harare, Bulawayo, Gweru, Masvingo and Mutare. There is one professional archivist who advises on file disposal, and there are four paraprofessional records management officers, three drivers and four orderlies at the Records Centre in Harare. Each of the provincial offices has one professional archivist, one paraprofessional records management officer, one typist and one orderly.

The Records Centre in Harare provides storage for semi-current and archival records. Semi-current records are required only infrequently. They are normally maintained in a records centre or other offsite intermediate storage accommodation. Non-current records are defined as those records that will be destroyed according to Standing Instructions (ie disposal schedules), but will not be destroyed for twenty-five years or longer, or, those that have archival value (normally less than 5%) and are ultimately transferred to the National Archives for permanent preservation.

**Role of the Records Centre**

The records centre is not responsible for current records. The management of current records is the responsibility of the registries of the ministries from which they originate. However, it was alleged that the registries are overwhelmed with the volume of records created and, to alleviate overcrowding, transfer current records to a records centre. One reason given for overcrowding is that the registries are congested with semi- and non-current records that should be transferred to the records centre. Many of the current records that the registries do transfer are still being requested frequently, almost daily, from agencies such as the Public Service Commission. While the Records Centre does return records to the ministries twice a week, records centre staff do not track the movements of current records because they do not see this as their responsibility. This situation will ultimately lead to a break down in the records management process because both the registries and the Records Centre are abdicating responsibility for this. Both have expressed concerns about understaffing and lack of resources. However, the Records Centre should be refusing to accept current records on the basis that the Standing Instructions should govern all transfers to the Records Centre. These Instructions set the retention periods prior to and following transfer and should be enforced by the Records Centre.

Because no one has claimed responsibility for this situation, and the problem has been allowed to continue for some time, congestion in government offices has continued to increase to the extent that some registries have rooms piled with records, many of which should have been transferred and destroyed long ago. In some cases the piles have fallen over and spilled across the floors of storage rooms and doors no longer open because the records block them. Records are very difficult to retrieve when needed. The solution is to decongest the registries and regularly transfer the semi- and non-current records to the Records Centre. This would allow room for the registries to keep, manage and track the current records. However, neither the registries nor the records centres have the staff or other resources to resolve this problem.
**Retention Schedules**

The National Archives has a records committee that advises on the development of records schedules (the Zimbabwe records management staff refer to these as ‘Standing Instructions’). (The Standing Instructions for Classes Common: Accounting is in Appendix H). Records scheduling is the process of assigning to categories of records the length of time they are to be retained and the disposal action that should be taken at the end of the retention period. By establishing a records schedule, an organisation ensures that records are removed from current storage at the appropriate time and disposed of when they are no longer required.

According to the Records Centre, Standing Instructions are distributed to all registries. However, in interviews all of the registry staff claims to be unaware of them. This only serves to compound the problem of knowing when to transfer records. A reason for this may be the fact that the National Archives is unable to carry out an effective programme of inspection and monitoring or to provide guidance. This, in turn, may be due to inadequate archives and records legislation and the absence of assigned responsibility for overseeing the management of current records.

**Electronic Records Facilities**

The Records Centre stores a few magnetic tapes for Central Computing Services. However, it does not have the facilities or expertise to manage electronic media adequately; there are no controls to ensure the tapes are labelled, indexed or maintained properly. Central Computing Services has responsibility for managing electronic records, but has no knowledge of records management nor of the requirements to keep information over time. The Records Centre does have an audio/visual unit that could serve as a starting point for managing electronic information and there has been some discussion about creating an electronic records unit within the next year. This unit would be co-ordinated by the Records Centre in co-operation with Central Computing Services. Although the discussion has not gone very far, the National Archives recognises this and is making plans to amend its legislation to incorporate the need to manage electronic records.

In addition to providing storage, the Records Centre runs a reference and request service. Public officials can phone and request files. However, most of these requests are for current records that the registries transfer to the Records Management Centre when they run out of room. As pointed out earlier, despite their continued use, the Centre does not track the movement of these records because they are technically not responsible for current records.

---

7 The committee is comprised of the National Archives Director acting as Chair, the Chief Records Management Officer and the Deputy Director. Representatives from the Public Service Commission, Ministry of Justice, the University of Zimbabwe History Department and senior officials from relevant departments are invited to participate. At present, there is a large backlog of records being held without processing by the Records Centre because they were unscheduled by the Committee at the time of transfer. Many of these records should have been destroyed long ago.
**Inspectorate Role**

The Records Centre also carries out an inspectorate role. Records management officers inspect offices to see how they are managing records, give advice where appropriate and submit a report of their recommendations to the head of the ministry or department under inspection. A Records Survey Worksheet provides a plan for the inspection to follow (see Appendix I for a copy of the Records Survey Worksheet). The records management officer should carry out a follow-up to their recommendations, but due to financial constraints this rarely happens. The Centre should carry out twelve inspections every year (three per quarter), but there is not enough staff available. Instead, the Centre determines where to inspect according to the amount of records generated by a department or agency or by invitation. Departments invite records management officers when they need assistance in keeping their records. This is not a regular occurrence. The Records Centre should become more proactive in its role as inspector and seek greater powers of enforcement, otherwise it will be reduced to a ‘fire-fighting’ role.

An inspection plan is evidence of best practice. The Records Survey Worksheet provides a good basic assessment of a registry. However, the inspection is meaningless if officials do not take account of recommendations. In addition to a plan for the inspection itself, best practice should specify a cycle of planned visits that would take account of all ministries over a period of time. The present system is too irregular and unsystematic.

Finally, the Records Centre organises workshops and seminars for provincial centres. These should occur on an annual basis. The purpose of these is to deliver papers on topics of relevance, share experiences and discuss problems.

**Capacity building in registries and records management**

Registry staff should have five O-levels and a certificate from the Highland Training Centre. Records management staff are required to have five O-levels, a certificate or better (ie a university degree) and relevant experience. However, for paraprofessional records management staff to obtain promotion they should obtain an MA in archives and records or library studies.

There are two programmes available that provide basic introductory paraprofessional training for registry staff and records clerks at the National Archives:

- **Zimbabwe Institute of Public Administration and Management (ZIPAM):** ZIPAM programmes are structured mainly to train mid- to upper-level managers. However, ZIPAM now includes some aspects of records management. This programme aims to train registry staff by teaching registry instructions. It consists of a five day short course.

- **Highland Training Centre:** The Training Centre is under the control of the Public Service Commission. Registry staff members often attend this programme. Attendees must already be working in a registry and must be nominated for training.
Harare Polytechnic provides another opportunity to advance by obtaining a certificate or diploma. The Ministry of Education sets the curriculum. National Archives senior records management staff participate in the teaching. The Certificate course is a one-year programme. Paraprofessional records management staff from the National Archives make up most of the students. The Diploma course is a two-year programme that began in February 1999.

The Records, Archives and Information Management Association of Zimbabwe and the Eastern and Southern Africa chapter of the International Council on Archives (ESARBOICA) provide limited additional training opportunities. However, it can be expensive and participants must belong to member institutions (ie the National Archives).

It is clear that there are seldom problems with obtaining basic introductory training. However, the National Archives has a problem recruiting and retaining senior records management and archives staff. For many years they relied on donor aid agencies to provide funding for staff to obtain an MA in archives and records or library studies from outside the country. Staff were sent to external programmes, often in the United Kingdom, because no programmes existed in the country. Donors no longer provide this funding and the Ministry of Home Affairs, to which the National Archives reports, does not provide funds either. This has created a situation where there are 26 posts for archivists and only six have qualifications in archival or library studies. The National Archives has approached the University of Zimbabwe, Department of History to develop an MA in History and Archival Studies, but it will take time to establish a programme.

Despite efforts, the National Archives is not realising its full leadership potential. Archives and records staff will need to know more about the use of current records in order to have a stronger impact throughout government. Clearly, there is a need to take training further and look more critically at how records are created and kept by the departments. For example, archivists traditionally know little, if anything, about financial and other transactional records. This is partially because these records are often excluded from registry systems. As a result, records staff have little experience in managing them. Archivists and records managers are generally not fluent in business process analysis and it is unlikely that they would ever participate in the redesign of business processes. Records managers and archivists do not create or use current record keeping systems, but they are expected to maintain them over time. However, it is still beneficial for them to understand how and why records are created and how they are used.

On the other hand, accounting clerks with responsibility for financial records should receive basic introductory training in keeping records. Despite the availability of training, accounting support staff are not required to take even a five-day short course offered by ZIPAM.
PART THREE: FINANCIAL MANAGEMENT SYSTEMS

This report covers an initial review of accounting systems in the Government of Zimbabwe. The main documentation flows examined were:

- Payments
- Revenue
- Payroll
- Pensions.

The accounting work is decentralised to the sector ministries but the payment system is centralised and controlled through a stop payment system that will not allow the cheque to be drawn if the budget is exceeded. Production of the monthly figures is normally subject to computer breakdowns, within seven working days of the month end. The current system has been in operation for over 15 years. Treasury instructions set out the financial procedures to be followed. The accounting procedures manual explains in detail the accounting process. These instructions include directions as to the operations of internal check and control systems.

Payments

Overview of process

Payment systems examined include the General Ledger and Budgeting System, Purchase Order Processing and Accounts Payable System, and Accounts Receivable and Invoice Processing System.

The main accounting processes begin in each ministry’s accounting units where payments are authorised and revenue is collected; it ends when vouchers are stored following payment and in the preparation of the general ledger. The commitment system in most ministries is manual. The ministries prepare the payment voucher and send a schedule of accounts to the Central Payments Office.

The Central Payments Office is the central point for the capture of all financial information. It checks whether the creditor number and information is correct and batches the vouchers according to a folio number and according to ministry. Folio numbers run from 1-999. The numbers are repeated once they reach 999. It takes approximately one month to run through the numbers before repeating them. Once batched, the information is input into the central mainframe using 12 Data General terminals and then the data input forms are boxed according to batch number and not ministry.

At present, there is only one exception in this process. USAid funded a pilot project to enable the Ministry of Education, Sports and Culture to capture its own payments information and send tapes directly to the Central Computing Services for processing. This excludes the Central Payments Office from making an external verification on vendor and payments information. The file formats used are the same; only the computer platform is different.
The Ministry of Education, Sports and Culture operate a 1VS: CPG system on a Wang network. It was designed to support 25 users, but can only support 12. The nine regional offices use the same system and submit their tapes to the central government office where the data is merged together and then submitted to Central Computing Services. It was intended initially that the data would be sent electronically via the telephone line to the central office, but this system failed due to poor telecommunications capacity. Therefore, the regions are required to send tapes overnight. This is not always achieved and often tapes are received late.

After the Central Payments Office captures the information the Central Computing Services or process it. Processing by Central Computing Services includes dealing with the direct deposits to creditors and printing cheques. Direct deposits are handled by producing cashbook diskettes that list all creditors to be paid by the Central Bank of Zimbabwe and Standard Chartered Bank. Along with the diskette, Central Computing Services prints a single cheque to each bank covering all payments to be made.

Central Computing Services manages the central mainframe treasury accounting system known as TY40 (ie the general ledger). The TY40 is a bespoke system built in the 1970s; it evolved from a punch card system. TY40 is a NEAT/3 system developed by NCI using assembly language. Although it runs on an NCI 9800 machine now, the program used to operate on a Criterion. Back-up tapes are stored in a strong room on site.

After processing, Central Computing Services issues a printout (ie a certificate of payment) that gives an accounting of expenditures. The Central Payments Office compares this printout with the appropriate batch and returns both to the ministry. At the end of each month Central Computing Services distributes a full printout report of all payments made that month. The ministries use this report to reconcile and request adjustments as necessary.

These objectives and purposes of each payment system are summarised in the tables that follow. (An analysis of documentation flow for payments is in Appendix D)

---

8 In addition to the general ledger mainframe system, Central Computing Services runs all the other centralised systems including: payroll, pensions, taxes, social welfare, higher education. Central Computing Services programmers are stationed at Customs to administer their system which runs on ASYCUDA software.

9 The TY41 module of TY40 is used to generate urgent cheques.

### System Objectives

**Purpose**
- to control the purchase of materials, goods, fixed assets, equipment, work and services, including travel and subsistence by ensuring that purchase orders are not raised unless the funds are available to pay for those services.
- to control travel and subsistence advances by ensuring that no advance is given unless previous advances have been cleared.
- to control the purchases by ensuring that they are only accepted and paid for against properly authorized purchase orders.
- to improve the control of the purchasing and payment functions by recording and producing purchase orders.
- to streamline the payments process to ensure that bona fide creditors are paid on time.
- to assist in cash flow forecasting.
- to provide a safe and secure process for the automated payment of creditors.

**Obstacles**
- to provide a specific supplier with a specific purchase order.
- to control travel and subsistence advances by ensuring that no advance is given unless previous advances have been cleared.
- to control the purchases by ensuring that they are only accepted and paid for against properly authorized purchase orders.
- to improve the control of the purchasing and payment functions by recording and producing purchase orders.
- to streamline the payments process to ensure that bona fide creditors are paid on time.
- to assist in cash flow forecasting.
- to provide a safe and secure process for the automated payment of creditors.

---

### Payments Process

**Purchase Order Function**
- Undertake a budget check to determine availability of funds prior to the issue of a purchase order.
- Maintain a register of purchase orders and ensure that purchase orders are not raised unless the funds are available to pay for the services.
- Generate automatic purchase orders with a unique order number for each order placed.
- Print disclaimers on the purchase orders with respect to price variations from original quotations.
- Establish control over and ensure comprehensive recording of commitments made by maintaining a register of purchase orders placed both internally and externally.
- Ensure that adjustments are made in the commitment process for cancelled and/or amended orders.
- Provide a means of checking that goods received and invoiced are in accordance with those ordered, either through matching goods received notes (where used) or verifying invoice details.
- Provide information on future liabilities with respect to goods and services ordered.
- Develop a system for receiving, clearing, and recording details of the latest prices of regularly purchased products.
- Maintain large supplier details by specific locations.

**Accounts Payable Function**
- Record and report the indebtedness to all suppliers.
- Provide means of monitoring unidentified and overdue orders.
- Maintain large supplier details by specific locations.
- Provide a means of monitoring unidentified and overdue orders.
- Improve monitoring of supplier markets by retaining details of the latest prices of regularly purchased invoices.
- Provide information on future liabilities with respect to goods and services ordered.
- Ensure that supplier payments are authorized in accordance with approved purchase orders.
- Provide a system for receiving, clearing, and recording details of the latest prices of regularly purchased products.
- Develop a system for receiving, clearing, and recording details of the latest prices of regularly purchased products.
- To control the purchases by ensuring that they are only accepted and paid for against properly authorized purchase orders.
- To streamline the payments process to ensure that bona fide creditors are paid on time.
- To assist in cash flow forecasting.
- To provide a safe and secure process for the automated payment of creditors.
- To provide a means of checking that goods received and invoiced are in accordance with those ordered, either through matching goods received notes (where used) or verifying invoice details.
- To provide information on future liabilities with respect to goods and services ordered.
- To develop a system for receiving, clearing, and recording details of the latest prices of regularly purchased products.
- To maintain large supplier details by specific locations.
- To provide a means of monitoring unidentified and overdue orders.
- To maintain large supplier details by specific locations.
## PAYMENTS System Objectives Purpose

1. to provide an improved means for the recording of non-tax revenue
2. to provide control and security for money received
3. to produce sales invoices for services provided by government to show 'customer' indebtedness
4. to assist with revenue forecasting
5. to streamline the receipts process to ensure that money is deposited and reconciled in a timely, accurate and efficient manner
6. to assist in cash flow management
7. to produce sales invoices for accounts payable

**Records Issues**

Broadly, the payments system works well and the accounting clerks are knowledgeable and know how to make it operate smoothly. However, there are limitations to the system. Most significantly, the current system is not integrated. A wide range of manual systems supports a central computerised batch processing system. This central system is stand-alone and interfaces only with the payroll system.

The manual systems capture and summarise transactions to provide control at the local reporting level. Centralised data capture only occurs at the point at which transactions are already authorised for payment (ie individual transactions are only captured immediately prior to payment).

This results in a system that does not provide adequate information on which to base decisions affecting financial management. Expenditures are committed at locations all around the country. District offices must send the associated data to the capital before it is captured in any organised way. The Central Payments Office only receives and enters records that are authorised for payment; there is no information about the commitments that are in the earlier stages of processing (ie commitments made with suppliers, but not yet approved for payment). The following table lists the volume of transactions that are generated by the Head Office of the Ministry of Education, Sports and Culture and its regional offices on a yearly basis.\(^\text{[10]}\) It provides an illustration of the scale of this problem.

\(^{10}\) Figures are derived from a report by Ernst & Young to the Government of Zimbabwe, Ministry of Finance. *PFMS Project Deliverables Volume I (July 1998).*

26
If the central payments system fails, the supporting paper records are of little value as back-up reference because it is difficult to retrieve them. To fully reconstruct a purchase, an accounting clerk might have to refer to several or all of the following documents:

- three competitive vendor quotations
- Comparative Schedule
- Tender Board approval
- Standing Contracts
- Tradesman’s Requisition (four copies exist)
- Commitment Register
- Packing slip/s
- Issue Voucher (four copies exist)
- Departmental Assets Register
- Assets Notice
- Receipt Voucher
- Sales Invoice
- Credit Notes
- Cash Receipts
- Deposit Slips
- Payment Voucher
- Schedule of Accounts
- Computer input readout.

This is difficult because either the requisitioning clerk, authorising officer, one or more accounting clerks, the authorised receiving employee, stores clerk, assets clerk, vendor, Central Payments Office staff or Central Computing Services staff could have any one or a number of these documents. There is no standard record keeping system or registry that manages and tracks these records. As a result, if there is a query, clerks retrieve information by memory.

There is little flexibility in the way that the system presents information. Ministries have little input into how information is structured by the system; this minimises further the ability for the system to support officials making financial decisions.
These limitations reduce the quality of the information that is made available to financial managers. It is these factors (and others) that have led the Ministry of Finance to commission an integrated computerised Public Financial Management System.

**Public Financial Management System (PFMS)**

With funding from the United Nations Development Program (UNDP), the Zimbabwe public service intends to introduce a computerised Public Financial Management System (PFMS) as part of the reform programme currently underway. The PFMS will carry out the accounting and financial transactions for all ministries so as to replace the sytems currently operated by the Central Payment’s Office and Central Computing Services. It is hoped that the system will enable the government to move forward from a cash accounting system to modified accrual accounting.

The project consists of two major components. The first stage involved a current situation analysis and strategy development. This was completed in December 1998. The second component of the project is to computerise government public financial management systems down to the provincial levels. The pilot phase was scheduled to begin in March 1999 and would involve the introduction of an SAP 4.0B integrated financial management system in Treasury Central Computing Services and the Ministry of Education, Sports and Culture. At the time of this visit, the pilot had been delayed until December 1999. Once the system is piloted successfully, it will be applied to other ministries.

The new system aims to extend the use of information technology into areas that are not being serviced at present. Its benefits should include:

- increasing the capacity to control and monitor expenditure and receipts both within line ministries and across government
- strengthening internal control to prevent fraud
- expanding the ability to access information on the government’s cash position and economic performance
- enabling the government to demonstrate greater accountability to donors
- standardising the accounting analysis of transactions, to enable comparisons across government, between periods and to meet international reporting standards
- producing prompt and accurate reports for budgets, actual expenditure and committed expenditure, at all levels and tailored to suit the needs and responsibility of each user. The system should allow for generation of various accounting and financial management reports
- addressing the control issue of purchase orders (commitment accounting) according to the availability of unspent and uncommited budget resources
- integrating the budgeting, expenditure and cashflow management systems.
The Government wants the PFMS to provide Zimbabwe with a modern accounting and financial management system that will have access to all the line ministries’ financial information and be able to control, monitor and supervise the management of public funds.

The design of PFMS reflects a requirement to continue to hold information centrally, but as far as possible, to delegate to line ministries control and accountability for their financial affairs. The system will not only process financial information relating to the resources consumed or received, but will also hold selective non-financial information relating, for example, to the output which has been generated. It will therefore hold a comprehensive picture of the level of performance that has been achieved.

Ultimately the system may reflect financial performance more accurately, but it may not meet fully the Government’s financial accountability requirements. Traditional information technology systems design uses an analytical method that draws a boundary around the computer. However, it is often the inputs and the outputs of the system that are required to demonstrate accountability. For example, tied to the PFMS system are extensive reporting requirements; much of which will consist of printed reports (see Appendix E). The National Archives is responsible for scheduling these records for destruction or transfer to the archives and will need to advise on new procedures for physically managing the inputs to and outputs from the system. The Accounting Manual should take account of these procedures.

**Revenue**

**Overview of Process**

Customs and Excise was selected to illustrate a revenue-generating department. The Department of Customs and Excise is part of the Ministry of Finance. It is responsible for assessing and collecting customs, excise, duties and import tax. The department also administers regulations pertaining to import and export control, exchange control, excise control and drugs control. Finally, Customs and Excise is responsible for licensing and controlling premises used for the manufacture of goods under rebate.

**Records Issues**

Three document flows were examined:

- clearance of commercial goods at a port of entry or inland port (Customs)
- issuing of import permits (Customs)
- drawback of duty (Excise).

Customs and Excise operates mixed manual and computerised systems. Zimbabwe uses ASYCUDA software to support the computerised parts of customs and excise functions.
Documents are prepared at the port level and data tapes are sent into to the head office in Harare. The head office often has problems retrieving electronic data. This is compounded by the fact that the central system is overloaded and cannot handle all of the data it is receiving. According to one internal auditor, there are no back-ups of the data. At the port level, where the original documents are kept, it was alleged that the Bills of Entry are improperly filed. To illustrate the magnitude of this problem, some ports may receive up to 800 Bills of Entry each day. As a result, if the central computerised system were to fail, it would be extremely difficult to retrieve paper documents from the ports in any meaningful way to reconstruct the system. Even in minor instances where data is either not input into a field or input incorrectly, it is virtually impossible to retrieve the document to correct the entry.

At the head office, the accounts section maintains files with serially numbered Bills of Exchange. The copies of these and all supporting documentation are retained by the Customs section, instead of being filed and stored in the registry. Messengers put records wherever there is space. Officials admit that records are not kept systematically and that, as a result, they are difficult to retrieve.

Transaction records are seen as a security item and are kept separately from the registry system which manages correspondence and other records. Clearance officers and accounting clerks in the head office accounts section have neither the training nor the obligation or motivation to keep records properly; it is not viewed as a priority.

The rotation of clearance officers present a unique problem. As an anti-corruption measure, the department regularly rotates officers to other ports where their main function is to collect duty. One effect of the rotation process is that officers do not feel a responsibility for the state of records at each port. Ports do not retain a specified individual to manage the records securely. In some cases, it was revealed that some officers resist keeping records in an orderly fashion because it is easier to hide a corrupt transaction in a chaotic system.

A registry system exists in the Department of Customs and Excise that extends from the head office to the border posts. However, because the department splits the management of main transaction records from that of other records, the registry is unable to bring transaction records under control. The registry has written instructions to manage correspondence files. (See Appendix E). However, the instructions would need to be adapted for use by the clearance officers and accounting clerks who keep the transaction records.

The registry supervisor from the head office carries out regional inspections. These inspections consist of checking whether the registry is following the indexing system. The supervisor will test whether the registry can retrieve records. This includes examining the shelf arrangement and checking whether files are kept systematically. An inspection is made of the file’s internal controls (ie whether pages are folioed). A general inventory of the registry is made to determine the total number of files, the number currently out of the registry, when these were removed and by whom. As part of the inspection, attempts are made to determine whether staff can locate a sample of these files. Finally, health, safety and security checks are made on the physical environment of the registry. The registry supervisor submits inspection reports to the head office, but few of his recommendations are followed-through. A report on the general situation has been submitted, but again, no action has been taken on it. There is no similar system of inspections for transaction records.
Payroll

*Overview of Process*

The human resource function is made up almost entirely of manually based processes. Every time an employee is hired three files are opened: one at the ministry, one at the Public Service Commission and one at the Salary Services Bureau. Copies of all documents of any actions taken regarding a civil servant’s terms of employment must be distributed to each of these files.

Officials in the ministries manually prepare all payroll actions and forward the documents to the Salary Services Bureau for processing. The Government currently pays civil servants using the Salary Services Bureau, which has its own bespoke computerised system to process the Government’s salary bill. The system was written in Progress language and is used on the AIX operating system on a Risc 6000 machine. The Public Service Commission is in the process of acquiring a human resources information system (HRIS) that will interface with the payroll system. It is expected that the HRIS system will be able to download selected salary information. At the time of the research study the Public Service Commission was taking delivery of the hardware.

The computerised pension system automatically writes records to an audit file following the verification process. A clerk cannot write to the audit file and the system cannot overwrite the file. Back-ups made of this file are stored on site.

Three document flows examined include:

- Joiners procedures (ie creation of a post, advertising posts, applicant registration, recruitment and selection, reappointment, etc)
- Leavers procedures (ie resignation, retirement, dismissal, etc)
- Change procedures (ie remuneration, advancements, promotions, transfer and regarding, etc).

*Records Issues*

The procedures for adding staff to the payroll, adjusting their salary as necessary and terminating their employment are clear and understood well by administrators. However, there are still problems with the system.  

11 Most problems occur in the area of allowances. The number of allowances runs into the hundreds and may apply to either individuals or classes of civil servants; some allowances are voluntary and some are not (ie medical aid is a voluntary allowance, but the level of aid is determined by the State). Salary Services Bureau officials also express concerns that the percentage of overtime allowance payments compared to pay is high. In addition to allowances, there is a problem with people retiring and still getting paid. The Ministry of Education in particular has a problem because of multiple payrolls (ie government payroll, Unified Teaching Services payroll).
In particular, payroll information is difficult to retrieve. The Salary Services Bureau registry receives all documents that the ministries submit to the Bureau. Upon receipt, a registry clerk inputs the key data into the payroll system. The clerk opens a file for new employees or, if the ministry is requesting a change or leave action, the clerk searches for the file for existing civil servants. Every civil servant has a salary file. All salary files, whether open files or closed, are kept on site in the registry. Over time, the registry has become highly congested and it is difficult to retrieve information efficiently.\footnote{12}

Information flow diagrams for joiners, leavers and change procedures are in Appendix F.

**Pensions**

**Overview of Process**

The Government operates one type of civil service pension scheme\footnote{13} It is both compulsory and contributory for all permanently employed civil servants; 7.5\% of a civil servant’s salary is paid to the pensions office. The pension scheme does not include contract employees.

The current system is completely manual. However, in 1998 a consulting firm carried out a systems analysis. The Adjudication Committee is now preparing an evaluation report to submit to the Tender Board and there are hopes that a computerisation project will commence by the end of 1999.

**Records Issues**

One of the most significant problems is that information flow is slow. For example there are cases where a ministry does not properly notify an individual that they are to retire.\footnote{14} This is discovered because the individual continues working, but their pay cheque stops. To solve the problem, the Public Service Commission’s regulations require that the ministry must re-employ the civil servant and then re-retire them. This increases overall salary costs to the government.\footnote{15}

The Pension Office of the Salary Services Bureau keeps all pension files. Transaction records in pensions do flow through the registry. Once a file is opened a location slip is created before the file is sent to the assessment department. However, once the file arrives in the assessment department all file tracking ends. Pension clerks do not fill out the location slip and send it to the registry as the file moves through the system. As a result, when an officer needs to find a file they must go to each section in the department to try to find it. In some cases this takes only a day, but in other instances it has taken up to four days or longer. Although it is rare for a file to become lost completely, much staff time is lost searching for files.

\footnote{12} The research team was not permitted to view the registry facilities at the time of this visit.  
\footnote{13} War veterans and war victims are paid under their own pension scheme.  
\footnote{14} The Ministries of Health and Education have the highest occurrence of this problem.  
\footnote{15} The research team was unable to obtain an approximate annual figure.
As a result of extreme congestion in the registry, many pension payments end up in a suspense account (ie a temporary deposit account) because the files are missing and the Salary Services Bureau cannot reconcile the pension with the pensioner. In some instances, the government has tried to deposit payments into a pensioner’s account but cannot do so because the account is closed. The bank does not feel it is their responsibility to provide details on closed accounts and the pension office does not have the file so they cannot distribute the payment to the individual. It is estimated that ZIM$ 7,000,000 is waiting in a suspense account for war veterans alone.

Process flow diagrams for Pensions are in Appendix G.

Section 3: APPROPRIATION ACCOUNTS

Comptroller and Accountant-General's Report

Issues

Vote 3

Salary

Estimate: Z$ 78.71000

5. The high incidence of misappropriation of public funds within the Ministry's departments is of concern. The Ministry was defrauded of over $1,425,120 through the manipulation of pay records by a Salary Service Bureau official. The new computerised payroll system which had been in operation since June 1995 had not yet been implemented. The system was not fully developed and testing procedures were not yet developed. The report on the payroll system which was to be approved by the Treasury did not include the specific expenditure accounts which was meant to include the reconciliation of manual advance records and the computerised system. The manual system was still in use and the computerised system needs to be improved.

6. The Ministry's advances records for all sub-votes were either incomplete or incorrect. A number of officers had multiple outstanding balances on subsistence and transport at the close of the financial year. Standing instructions forbid the issue of additional advances until the advances made in previous months have been cleared. Additional advances were issued instead of the reconciliation of manual advances records and the computerised system. The reconciliation of manual advances records and computerised system needs to be improved. The computerised system is not able to track expenditure, perhaps auditors need to be obliged to include specific expenditure tracking in their programmes.

7. The Government was defrauded of over $798,544 through the manipulation of pay records. The manual commitment register which is meant to reconcile monthly, and the Appropriation Report from the accounts system would reflect expenditure at any time after it occurred. This is an example of records NOT being sought.

3. A number of officers had multiple outstanding balances on subsistence and transport at the close of the financial year. Standing instructions forbid the issue of additional advances until the advances made in previous months have been cleared.

The computerised system in use and the planned PFMIS can track expenditure, perhaps auditors need to be obliged to include specific expenditure tracking in their programmes.

12. The Government was defrauded of over $798,544 through the manipulation of pay records. The manual commitment register which is meant to reconcile monthly, and the Appropriation Report from the accounts system would reflect expenditure at any time after it occurred. This is an example of records NOT being sought.

The computerised system in use and the planned PFMIS can track expenditure, perhaps auditors need to be obliged to include specific expenditure tracking in their programmes.

### Comments of C&AG

This is a recurrent issue throughout the report. Clearly, PFMS could suffer the same abuses, ie non-entry of information.

Section 3: APPROPRIATION ACCOUNTS

Comptroller and Auditor-General’s Report

Issues

Vote 9: Lands, Water, and Environment

1. The Ministry failed to submit the following returns:
   1.1 Administration and General Sub-Vote: Subsistence and Travel Inter-Departmental Transfers: Interim Salary Advance
   1.2 Water Development Sub-Vote: Central Payments Office Water Development Working Inter-Departmental Clearance: Interim Salary Advance

Diagnosis

1.1 Administration and General Sub-Vote: It is noted that advances are meant to be recovered from employee salaries. Where this does not happen, the relevant data may not be being captured in specific records.

2. The Ministry did not have the following accounting records in place:
   2.1 Administration and General Sub-Vote: On-Site Payments Advances: Disallowances, Interim Salary Advance, Departmental Surcharges, Suspense Accounts
   2.2 Surveyor General Sub-Vote: Temporary Deposits – Sale of Photographs, Temporarily Deposits – Sale of Surveys, Compensatory Ex-Gratia Payments
   2.3 Water Development Sub-Vote: Vote of Credit Transfers, Compensatory or Ex-Gratia Payments

PFMS design needs to take National Development Fund accounting requirements into account (this may already be the case).
Analysis of the Report of the Comptroller and Auditor-General
for the Financial Year Ended June 30, 1996

Section 3: APPROPRIATION ACCOUNTS

Comptroller and Accountant-General’s Report

Issues

1. The Ministry failed to submit the following returns for audit:
   - Receipts and Disbursements
   - Losses of and Damages to State Property

1.1 The other returns were submitted well after the statutory deadlines, thus seriously hampering my timeous completion of the audit.

2. The liability of the Ministry on the loans stood at 29 loans (1994/95: 27 loans) on-lent loans which were not supported by on-lent agreements from a total of 60 on-lent loans administered by the Ministry. Would PFMS flag disbursements of on-lent loans where the code for the agreement had not been input?

3. The Ministry did not maintain an independent record of the Ministry’s loan guarantees. Would PFMS record guarantees for loans or their absence?

4. The Ministry did not maintain an independent record of the Ministry’s loan records. The Ministry’s total liability as at June 30, 1996, was correct at 33 loans, 1994/95: 32 loans.

Audit Issues/Computerised Systems

1. The Ministry did not maintain an independent record of the Ministry’s loan guarantees. Would PFMS record guarantees for loans or their absence?

2. The Ministry did not maintain an independent record of the Ministry’s loan records. The Ministry’s total liability as at June 30, 1996, was correct at 33 loans, 1994/95: 32 loans.

3. The Ministry did not maintain an independent record of the Ministry’s loan guarantees. Would PFMS record guarantees for loans or their absence?

4. The Ministry did not maintain an independent record of the Ministry’s loan records. The Ministry’s total liability as at June 30, 1996, was correct at 33 loans, 1994/95: 32 loans.

Section 3: Appropriation Accounts

Vote 12: Transport and Energy

1. Unauthorised Expenditure

1.1 It is a requirement of Treasury that invoices for goods and services are due and payable when goods are delivered or services rendered. However, in a sample of 30 transactions covering deliveries of goods for which there was no budgetary provision, it was found that 59 vouchers total $1,124,321 were held back during the financial year. This action had the effect of understating by a like amount the total expenditure on the Vote as a whole. Furthermore, the expenditure will have an adverse effect on the Ministry’s cash flow in the 1996/97 financial year.

1.2 The Department of Civil Aviation incurred $130,512 due to withheld vouchers. Of this amount, $104,696 were exchange losses and $25,816 were for interest rates. Taking delivery of goods for which there is no budgetary provision is in contravention of the payments procedures. The commitment register would (if up-to-date) show clearly where funds are available. Deliberate contravention can only be deterred.

2. Advances (including Disallowances)

2.1 A Deputy Secretary at the Ministry of Transport and Energy was advanced $12,000 for a business trip to Portugal which was subsequently cancelled. I did not find any evidence to suggest that the money was refunded in addition to the officer in question being sent on further advances. Furthermore, the payment was subsequently cancelled. I did not find any evidence to suggest that the money was refunded in addition to the officer in question being sent on further advances.

2.2 Two Deputy Secretaries were overpaid $6,000 each on their December 1995 gross salaries and I did not see any evidence to suggest that the money was refunded. The weakness of SSB in making deductions from personal emoluments recurs across ministries (see above).

</tbody>
</table>

3. Fourteen returns were not submitted for audit, namely:

- Receipts and Disbursements 1994/95
- Extraneous Works: Central Laboratory, Central Mechanical Equipment Department, Defence, Central Laboratory Samora Machel and Mutare, Lands, Local Government, Post and Telecommunications, Civil Aviation, Water Development, Local Authorities, Provision Cont;
- Provincial Clearing Account (old), Departmental Assets

4. The return submitted by the Ministry had a "nil" opening balance.

5. The Ministry did not produce a departmental assets certificate.

6. The return submitted by the Ministry had a "nil" opening balance. I was, therefore, unable to satisfy myself on the accuracy of the return.

No effort was made to reconcile the Ministry’s opening balance with that of the Treasury. A balance of ($20,782,014) as at June 30, 1995, should show a balance of ($22,730,040) as at June 30, 1996.

No effort was made to reconcile the Ministry’s opening balance with that of the Treasury. A balance of ($20,782,014) as at June 30, 1995, should show a balance of ($22,730,040) as at June 30, 1996.

The return submitted by the Ministry had a "nil" opening balance. I was, therefore, unable to satisfy myself on the accuracy of the return.

The Ministry did not produce a departmental assets certificate.

The Ministry did not produce a departmental assets certificate. I could not, therefore, satisfy myself on the completeness of the departmental assets certificate for such. I could not therefore satisfy myself on the completeness of the departmental assets certificate for such.

Bodies was rendered suspect.

Guarantees issued to cover loans made to statutory bodies by Government. The accuracy of balances in respect of guarantees issued to cover loans made to statutory bodies whose borrowings had been guaranteed was a collection of individual returns submitted by the Ministry. Adherence to the requirement of including balances in statutory liabilities was not maintained. This raised questions about the Ministry’s adherence to the requirement of including balances in statutory liabilities.

The Ministry did not produce a departmental assets certificate.

The Ministry did not produce a departmental assets certificate. I could not, therefore, satisfy myself on the completeness of the departmental assets certificate for such. I could not therefore satisfy myself on the completeness of the departmental assets certificate for such.

The Ministry did not produce a departmental assets certificate. I could not, therefore, satisfy myself on the completeness of the departmental assets certificate for such. I could not therefore satisfy myself on the completeness of the departmental assets certificate for such.

The Ministry did not produce a departmental assets certificate. I could not, therefore, satisfy myself on the completeness of the departmental assets certificate for such. I could not therefore satisfy myself on the completeness of the departmental assets certificate for such.

Would PFMS avoid this situation? If so how?

**Issue:**

Unprocessed invoices.

**Finding:**

Unprocessed invoices often represent goods already received, i.e., the commitment has crystallized and will probably be carried forward into the next fiscal year. This affects budget performance for the next year.

**Comment of C&AG:**

For the third year, I was unable to place any reliance on the Departmental Asset Certificate as the Master Asset Register was not up to date. There were numerous discrepancies noted between Mission records and Head Office records. This is a clear example of a lack of enforcement of procedures which would not be solved by computerization alone.

**Materiality:** 11.53%

### Vote 19: National Affairs, Employment Creation and Co-operatives

2.2 Although physical assets count was carried out, not all of the Ministry’s offices were covered and no comprehensive reconciliations of assets to the records were in evidence.

2.3 The register was out of date.

### Vote 20: Home Affairs

3.2 I was unable to verify figures analysed below, which were not submitted for audit as the returns that support the figures were not submitted for audit.

4. As was the position in the previous year, the Ministry failed to submit for my audit the return for Receipts and Disbursements. I was therefore unable to verify the correctness of the total amount of $47,379,971 which featured on the Exchequer Account as revenue of the Ministry for the year ended June 30, 1996. The statement submitted by Zimbabwe Republic Police had an imbalance of $15,731 and no satisfactory explanation was given. In a similar manner, the return submitted by the Ministry for the previous three years in succession was not submitted.

### Specific Records

- **Vote 19:**
  - **Departmental Assets:**
    - 2.2 Although physical assets count was carried out, not all of the Ministry’s offices were covered and no comprehensive reconciliations of assets to the records were in evidence.
    - 2.3 The register was out of date.

- **Vote 20:**
  - **Advances (including Disallowances):**
    - 3.2 I was unable to verify figures analysed below, which were not submitted for audit as the returns that support the figures were not submitted for audit.

- **Receipts and Disbursements:**
  - 4. As was the position in the previous year, the Ministry failed to submit for my audit the return for Receipts and Disbursements. I was therefore unable to verify the correctness of the total amount of $47,379,971 which featured on the Exchequer Account as revenue of the Ministry for the year ended June 30, 1996. The statement submitted by Zimbabwe Republic Police had an imbalance of $15,731 and no satisfactory explanation was given.

<tr>
<td>20</td>
<td>Unvouched Expenditure</td>
<td>$12,836,362</td>
<td>Z$644,350,000</td>
</tr>
</tbody>
</table>

5. My examination revealed unvouched expenditure amounting to $12,836,362 made up of missing payment vouchers of $2,518,357 and inadequately supported payment vouchers of $10,318,005. I could therefore not determine whether the expenditure incurred formed a proper charge to public funds.

6. I am concerned that the Ministry did not keep proper accounting records in the form of registers and ledgers for the following accounts as required by the Treasury Instructions: Head Office – Advances Travelling and Subsistence, Departmental Assets, Head Office – Advances Travelling and Subsistence, Departmental Assets, Head Office – Advance Medical, Temporary Deposits Cycles and Miscellaneous Advances. These are critical for the recovery from future salary payments where the T.I requires it. Unvouched expenditures could mask a systemic fraud in this area.

7. The Ministry was fraudulently charged an amount of $1,425,120 when an employee of the Salary Service Bureau manipulated pay records by reactivating the pay file of a deceased member of the Zimbabwe Republic Police and transferring the amount into his bank account. Another instance of records not coming into existence of new computerised systems on which requisite records do not come in to existence.

The T.I. has already carried out an audit of records relating to the above. How will P.F.M. systems address these issues? Issue is will P.F.M. systems address these issues? How will P.F.M. systems address these issues?

**Estimates for Salaries and Allowances:**

- **Z$ 644,350,000**
### Vote 21: Justice, Legal and Parliamentary Affairs

#### Estimate:

- ZS 277,358,000

#### Comment of C&AG (General)

- Mis-management

#### Vote: 2: Justice, Legal and Parliamentary Affairs

#### Finding

1. It is a requirement of the Treasury Instructions that bills for goods and services are due and payable on presentation.

In a sample audit, two payment vouchers from a certain company totaling $100,280 were not presented for payment but held back during the financial year. The current financial year's total expenditure was therefore understated by the same amount. This is the fourth time in as many years that I have observed this practice.

DATA FLOW DIAGRAMS: PAYROLL
APPLICANT SELECTION PROCESS – (ENTRY LEVEL)

START

1
Vacancy arises or post is created

2
Availability of funds is checked with Treasury by line min

3
Post is declared at PSC

4
Applicants on register are screened

5
Specifications met?

yes

6
Shortlist of 5 candidates is selected

Pension specification

8a PSC sends contact details of graduates to line min

7 Is vacancy filling urgent?
   yes
   9 Applicants contact details are sent to line min for contact by telegram

8b Interview dates are arranged by PSC and candidates notified

10 Recruitment writes to PSC for approval

11 Funds available at PSC?
   yes
   13 Internal management Services advertises

12 Ministry advised to advertiser
   no

14 Applicants apply direct to line ministry

15 Applicants details are received at line min

16. Line min shortlists

17. Line min invites applicants for interviews

18. Line min selects interview panel

19. Interviews are conducted

20. Interview report is sent to HOLM for approval or recommendations

21. HOLM reviews and confirms a decision

Interview Report
Applicants are advised

Interview Report is sent to PSC

Security check and medical exam are done

Appointment forms are raised

Report to MOHCW if medical results are not satisfactory

Copies to SSB, PSC, CAG

END
Remuneration Administration Process – Annual Salary Increases

1. In March of every year, job evaluation is done.

2. Establish grades for every post.

3. Establish parameters for negotiations.

4. Seek advise from Treasury on the parameters.

5. Report to the Cabinet the parameters for negotiations.

6. Does Cabinet approve of parameters?
   - **YES** → **7. Conduct negotiations**
   - **NO** → **3. Establish parameters for negotiations**

Agree on increases and adjustments

Draw up a report to present to PSC and Minister

Present report to Minister and PSC

Does Minister agree with increases on report?

Minister informs Cabinet through as Cabinet Paper

Employees are notified of the increases

START

Cabinet Papers
Ministry of Finance
Salary Adjustment Process

START

The over or erroneous salary payment is identified

Journal voucher is raised, approved and posted to transfer the incorrect amount from current year from appropriation to suspense

Consideration is given to any prior year element of the over payment and the appropriate accounting treatment is undertaken

Establish recovery of over or erroneous payment with the individual concerned

A

Ministry of Finance
Salary Adjustment Process

A

Is recovery likely?

yes

Is recovery to be made through a single payment?

yes

Post receipt voucher clearing the outstanding suspense account

no

no

Take a proper action to write off, clearing suspense account

Arrange to make regular deductions from salary making incremental deductions in the outstanding balance on suspense account until cleared.

Report circumstances of over or erroneous salary payment and reason for write off

START

Advancement Process

1. Personnel Section of the ministry initiates advancement, if person completes certain number of years

2. A performance assessment is done by the Head of Department

3. Principal Establishment convenesSuitability Board to interview the employee

4. Suitability Board makes recommendations regarding candidate suitability for advancements

5. If employee is senior to the employee a senior administration officer?

6. Ministry sends the report to the PSC

7. The Secretary of the Commission convenes a commission staff panel to assess suitability of employee for advancements

8. The panel makes recommendations in favour of advancements

10. Head of the ministry communicates decision to the employee

11. If the employee accepts decision made by the PSC

12. For all other grades, ministry makes the final decision

13. Employee appeals to the PSC

14. Copy of letter is only sent to the ministry

15. Minutes of the meeting

16. Report

17. Minutes from the Suitability Board

For all other grades, ministry makes the final decision.

If the advancement is approved:

- Decision is communicated to the employee regarding the advancements.
- Copies of the letter are sent to SSB, PSC and Controller and Auditor General.

If advancement is disappointed, the matter is deferred for one year.

Advancement is reviewed the following year.
Promotions Process

1. Post falls vacant
2. Line ministry checks if it exists on establishment and is budgeted for
3. Can post be filled from public service?
4. Post is advertised externally
5. Post is advertised internally
6. Applications are received at the ministry
7. Promotion committee shortlists candidates
8. Interview panel is selected
9. Applicants are invited for interviews
10. Interviews are conducted
11. Secretary of panel compiles report
12. Report is circulated to panel members for verification and endorsement
Chairman reviews to endorse/make own recommendation

28 Meeting of commissioners to discuss case

27 Chairman reviews and decides whether or not the report must be discussed by the full Commission?

Decision to promote made

no

yes

29

30 Defer or reinterview or readvertise

31a For Grades 3 to 1 report is sent to secretariat

32 Secretariat refers report to OPC for approval

33 OPC sends letter to approval to chairman

31b Decision to promote is communicated to HRD by secretariat

34 HRD informs Line Min

35 Ministry informs successful applicant & other (internal & External adverts)

36 PSC informs unsuccessful applicants (PSC vacancy notices)

END
Regrading and Transfer and Regrading
Initiate by Individual

1. Individual approaches HOS of line min with newly acquired qualification or personal reasons requesting to be regarded and/or transferred

2. HOD forwards request to PSC

3. PSC studies facts and assess qualification

4. PSC establishes the existence of post in min

5. Does vacancy exist?
   - no
   - yes

6. PSC approves regrading

7. PSC checks the existence of such a post in any other line min

8. Vacancy available?
   - no
   - yes

9. Approve regrading?
   - no
   - yes

10. Inform employee

PSC informs HOD of line min

10

HOD of line min informs employee date of assumption of duty

11

PSC notified SSB C and AG

12

PSC approves transfer and regrading

9

Inform employee date of assumptions of duty

19

Send copies of documents to PSC, SSB and C and AG

21

Information employee

22

Communicate decision to PSC

20

END

11

yes

9

yes

19

END

10

78

Transfer and Regrading
Initiated by the PSC

1. PSC identifies under utilisation of capabilities in individual

2. PSC identifies need for such an individual in any line min

3. PSC establishes the existence of a vacancy in any line min

4. PSC approaches HOD of identified line min with offer for employee

5. HOD talks to employee about offer

6. Does employee agree to be regraded?
   - no
   - yes

HOD notifies PSC

HOD informs PSC of agreements

PSC notifies HOOD date of assumption of duty and all changes to employees status

Employee is informed

PSC communicated these changes to SSB and C and AG

END
1. START

2. Notice in writing to HOD

3. Personnel officer checks status of employee

4. Confirms with HOD

5. Acknowledge resignation

6. Advise SSB

7. Issue certificates of service

8. Breach of Notice
